FOR HERITAGE NGOS & COMMUNITY ORGANISATIONS

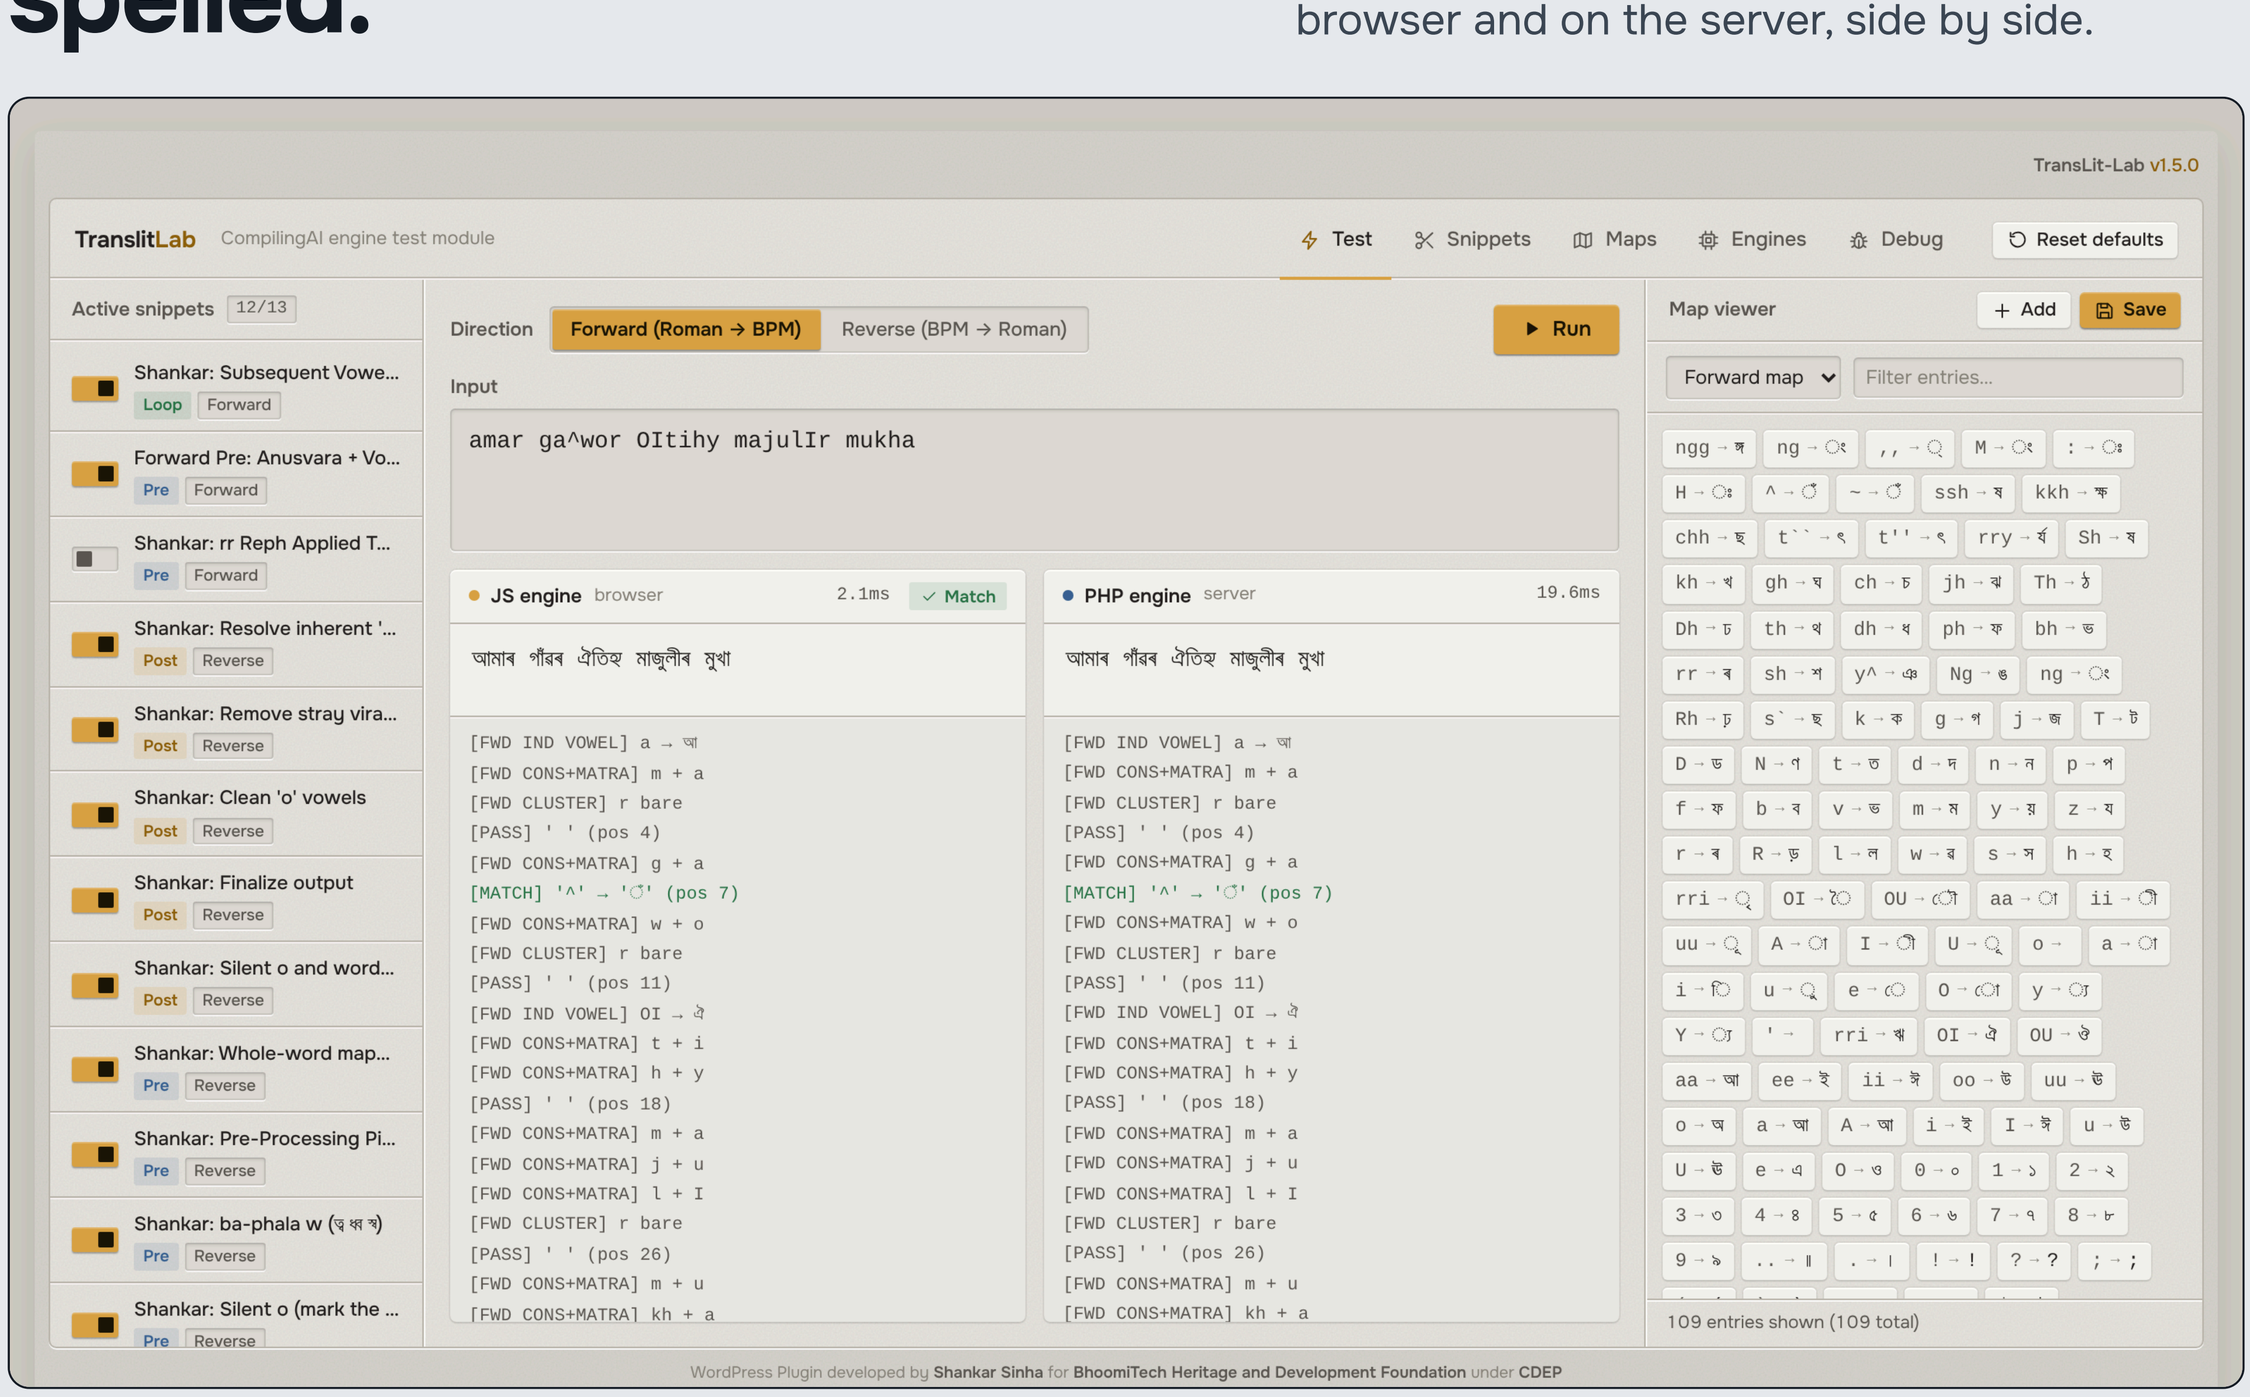

Free WordPress plugin · v1.5.0

TransLit-Lab

The workbench behind our script tools

Teach the engine how your language is spelled.

A lab on your WordPress site for building and testing the transliteration rules behind our Roman and Eastern Nagari tools, in the browser and on the server, side by side.

Testing an Assamese phrase: the browser and server engines agree, step by step

01

Two engines, one answer

Run the same text through the JavaScript and PHP engines and compare their output and logs.

02

Maps and rules to edit

Edit the letter maps by section, and add rules that run before, during or after each conversion.

03

Safe for a team

Approve each transliterator and their tabs. Every change is kept in a revision history you can restore.

USE IT FOR

Building a spelling scheme for a new language · Fixing words native speakers report · Testing rules before they reach the apps · A record of every change to the scheme

Build your language’s scheme with us.

Free for language groups, heritage societies, universities and cultural trusts. We’ll help you install the lab and set up your first letter map.
